

# Overhead Fill Station Program

## About the Program

Eastern Municipal Water District (EMWD) offers a program for residents who have failing, private groundwater wells or who are in remote locations of the service area where it is currently cost-prohibitive to construct water service infrastructure.

EMWD's Overhead Fill Station Program is designed to meet the needs of qualifying residents so they may have a safe, reliable water supply.

Residents must submit an application and meet eligibility criteria. Once approved, residents may receive an electronic key for the Overhead Fill Station and pay a small monthly fee to maintain access. Residents may use the fill station to fill water trucks or large storage tanks of water that can be hauled to their properties. The water may only be used for drinking and health and safety purposes and may not be used for landscape irrigation or dust control purposes.

EMWD currently has two overhead fill stations - one in southeastern Menifee and one in Mead Valley.

For more information on the program, please contact EMWD's Development Services department.
