

An Employee-Owned Company

November 29, 2022

Mr. Joe Broadhead
Principal Water Resource Specialist
Eastern Municipal Water District
2270 Trumble Road
Perris, CA 92572-8300

Reference: Archaeological Resources Survey Report for the Los Alamos Hills Water System Project
(RECON Number 9878-9)

Dear Mr. Broadhead:

This letter details the results of an archaeological resources survey conducted for the Los Alamos Hills Water System Project (proposed project). RECON Environmental, Inc. (RECON) conducted background research, reviewed historic aerial photographs, and completed a pedestrian survey of the project area. This letter report has been prepared to provide necessary information to identify adverse impacts to potentially significant cultural resources by implementation of the proposed project.

PROJECT LOCATION AND DESCRIPTION

The project consists of the installation of a pipeline loop within existing city streets to provide imported water services to a residential area that currently relies on private wells for potable water. Pipe size would vary, with diameters ranging from 8-inch to 12-inch at approximately 4 to 7 feet in depth. The total length of the proposed loop pipeline is approximately 10,685 linear feet (approximately 2 miles). The following are the pipeline segments that make up the proposed project:

- Los Alamos Road 12-inch pipe, Celia Road to Mason Avenue (approximately 3,350 linear feet)
- Celia Road 8-inch pipe, Mary Place to Mason Road (approximately 2,000 linear feet)
- Mason Road 8-inch pipe, Mary Place to Los Alamos Road (approximately 1,260 linear feet)
- Mary Place 8-inch pipe, Celia Road to Mason Avenue (approximately 3,400 linear feet)
- Ruth Ellen Way 12-inch pipe, Los Alamos Road to the northern property line of Rail Ranch Elementary School (approximately 675 linear feet)

The project site is located in the city of Murrieta, California (Figure 1). Regional access to the project site is provided via Interstate 215 (I-215), located approximately 0.45 mile to the east, and local access is provided via I-215 and east on Los Alamos Road. The project site is in the U.S. Geological Survey Murrieta quadrangle, Township 7 South, Range 3 West (Figure 2). All pipeline segments would be constructed within the existing easements and rights-of-way. The project area is comprised of paved and unpaved ground, either bare or with existing and disturbed vegetation, within existing easements and rights-of-way along Los Alamos Road, Mason Avenue, Mary Place, Celia Road, and Ruth Ellen Way (Figure 3). The project is generally bounded by commercial development and undeveloped lots to the north, residential development to the south, residential and commercial development to the west, and undeveloped lots to the east. The area of potential effect (APE) is 9.0 acres.

METHODS

In order to determine if this project will adversely impact significant cultural resources, background research, a review of historic aerial photographs, and an on-foot survey was completed by RECON archaeologist Nathaniel Yerka on November 14, 2022. Prior to the survey, a records search of the five pipeline alignments was requested from the Eastern Information Center (EIC) to identify any previously recorded cultural resources located within a one-mile radius of the project area. In addition, a letter was sent on September 22, 2022 to the Native American Heritage Commission (NAHC) requesting a search of their Sacred Lands File to identify spiritually significant and/or sacred sites or traditional use areas in the project vicinity (Attachment 1). The NAHC was also asked to provide a list of local Native American tribes, bands, or individuals that may have concerns or interests regarding cultural resources potentially occurring within the area of potential effect.

The primary goal of this survey was to determine (1) if there are previously unrecorded cultural resources present, and if so, document the resources’ locations and what they consist of and (2) to update conditions of previously recorded cultural resources. The project area was inspected for evidence of archaeological materials such as flaked and ground stone tools or fragments, ceramics, milling features, and human remains. Survey transects were concentrated on the sides of the paved roadways, as well as on the open areas of the unpaved roadways, since this approach offered the most ground visibility.

RESULTS OF RECORDS SEARCH

The records search results from the EIC indicate that 57 investigations have been conducted and 33 resources have been recorded within one mile of the project area (Confidential Attachment 1). Of the 33 resources, 2 are historic foundations, 1 trash scatter, 1 single-family property, 2 historic-era isolated artifacts, 21 prehistoric resources, and 6 prehistoric isolated artifacts. Prehistoric resources include bedrock milling features, lithic scatters, ground stone scatters, and faunal remains (Table 1). Of these, 8 investigations and 2 resources (P-33-0293953 and P-33-006237) cross the project area. A response was received from the NAHC on November 3, 2022 indicating that their Sacred Lands File search results were positive (see Attachment 1).

Bold = Previously recorded cultural resources mapped within the project area.

P-33-023953 is a 6.33-mile segment of Los Alamos Road recorded in 2014. The alignment for Los Alamos Road historically extended between Jefferson Avenue on the west end and Winchester Road (State Route 79) on the east end. It was declared a public highway in 1891 and started as a 60-foot standard width dirt road. The western portion of the roadway was paved circa 1987 and the portion east of Warm Springs Creek was still a graded dirt road in 1994. A 0.5-mile segment east of Briggs Road has been removed and landscaped. The roadway has been recommended not eligible under the National Register of Historic Places (NRHP) and under the California Register of Historical Resources (CRHR) because the road was not a primary route across the region like, e.g., the highly used Winchester, Washington, Murrieta Hot Springs, and Benton Roads were (Gousha Company as seen in Smallwood 2014). The roadway also does not qualify under the criteria for historic designation per the City of Murrieta’s Municipal Code.

P-33-006237 was recorded in 1995 as James Place, a single-family residence with associated outbuildings. The recorded outbuildings include a barn, a stone masonry barbecue with picnic table, a storage shed, and a grain storage tower. The circa 1915 one-story wood-framed residence was recommended as potentially significant under criterion C/3 as an example of rural vernacular residential architecture during the Anglo farming period; however, the addition of two rooms and severe fire damage resulted in poor integrity and a recommendation of not significant for the NRHP or CRHR. A 1995 summary report of the measured drawings and photographic documentation by Janet L. Tearnen and Andrea Urbas was included in the records search data. This report was completed prior to the demolition of the residence and outbuildings (Tearnen and Urbas 1995).

RECON reviewed historic aerial photographs from 1938, 1967, 1978, and 1985. The 1938 photograph exhibits Los Alamos Road surrounded by agricultural fields and undeveloped lands; none of the other four roads were noted. The northern extent of the road within the project area followed a slightly different alignment in 1938. The 1967 photograph displays the same alignment for Los Alamos Road and the addition of Mason Avenue. By 1978, Mary Place and Celia Road are present, and the alignment of Los Alamos is straightened to its current alignment. The 1978 photograph also exhibits various small residential plots along the southern side of Los Alamos Road, the western side of Mason Avenue, and the northern side of Mary Place. Ruth Ellen Way is also present in 1978 as a small dirt road. The latter road follows the current width and alignment by the 2002 photograph. The residential plots along the southern side of Los Alamos Road, the western side of Mason Avenue, and the northern side of Mary Place, increase by the 1985 photograph (Nationwide Environmental Title Research LLC 2022).

RESULTS OF SURVEY

RECON archaeologist Nathaniel Yerka conducted a pedestrian survey of the project APE on November 14, 2022 and did not identify any cultural resources. Ruth Ellen Way, Los Alamos Road, and Mason Avenue are paved roadways. Ruth Ellen Way exhibits shoulder pathways made of imported base material with white vinyl fencing on the east side of the roadway, and concrete sidewalks on the west side (Photograph 1). A municipal park is on the east side of Ruth Ellen Way while an elementary school field as well as residential housing is to the west. The shoulder along the north side of the northeastern segment of Los Alamos has an improved pathway with white vinyl fencing along the length of the park while the southern shoulder is unimproved and fronts residential lots. Northeast of the park, the road shoulders of Los Alamos Road are unimproved and the area consists of agricultural fields on the north side and residential lots on the south side (Photograph 2). Mason Avenue has disturbed soft shoulders with an improved horse trail along the east side. Mary Place and Celia Road are unpaved dirt roads with ornamental vegetation along their shoulders (Photograph 3). Celia Road has been built at a higher elevation than the surrounding house pads and has improved ditches on either side of the roadway for drainage (Photograph 4). The entire project area has been disturbed in the past by grading and maintenance of the roads.

REGULATORY CONTEXT

California Environmental Quality Act

The regulatory framework and methods for determining impacts on cultural resources include compliance with California Environmental Quality Act (CEQA) requirements as defined in Section 15064.5 of the CEQA Guidelines, Determining the Significance of Impacts to Archaeological and Historical Resources. These guidelines require the identification of cultural resources that could be affected by the proposed project, the evaluation of the significance of such resources, an assessment of the proposed project impacts on significant resources, and a development of a research design and data recovery program to avoid or address adverse effects to significant resources. Significant resources, also called historical resources, are those cultural resources (whether prehistoric or historic) that have been evaluated and determined to be eligible for listing in the California Register of Historical Resources.

PHOTOGRAPH 1

Los Alamos Heights Road

PHOTOGRAPH 4
Overview of Celia Road with Drainage Ditch, Looking South from Celia Road,
Approximately 500 feet South of Intersection with Los Alamos Road

According to CEQA Section 15064.5(a), a historical resource includes the following:

1. A resource listed in, or determined to be eligible for listing on, the California Register of Historical Resources.
2. A resource included in the local register.
3. A resource which an agency determines to be historically significant. Generally a resource shall be considered to be "historically significant," if the resource meets the criteria for listing on the California Register of Historical Places (Public Resources Code Section 5024.1 Title 14 California Code of Regulations, Section 4852) including the following:
 - A. Is associated with events that have made a significant contribution to the broad patterns of California's history or cultural heritage;
 - B. Is associated with the lives of persons important in our past;
 - C. Embodies the distinctive characteristics of a type, period, region or method of construction or represents the work of an important creative individual, or possesses high artistic values; or
 - D. Has yielded, or maybe likely to yield, information important to prehistory or history.
4. The fact that a resource is not listed in or determined to be eligible for listing in the California Register of Historical Resources or a local register does not preclude a lead agency from determining that the resource may be an historical resource as defined in Public Resources Code Sections 5020.1(j) or 5024.1.

A resource must meet one of the above criteria and must have integrity; that is, it must evoke the resource's period of significance or, in the case of criterion D, it may be disturbed, but it must retain enough intact and undisturbed deposits to make a meaningful data contribution to regional research issues.

MANAGEMENT RECOMMENDATIONS

No significant prehistoric or historic cultural resources were observed during the survey. The records search identified two cultural resources within the project area. P-33-006237 was recorded in 1995 as a single-family residence with associated outbuildings but the property has since been demolished; therefore, it is not eligible for listing on the CRHR. Los Alamos Road (P-33-023953) has been present since 1891 but it does not meet the criteria for listing on the CRHR. Because none of these resources are significant, the project would not result in an adverse impact to known cultural resources. Because the entire project area has been disturbed by past development and the possibility of buried significant cultural resources being present within the project area is considered low, RECON does not recommend any further cultural resources work for this project.

Please call me at (619) 308-9333 extension 133 you have any questions or concerns about this project.

Sincerely,

Carmen Zepeda-Herman, RPA
Archaeology Project Director

Re: Los Alamos Hills Pipelines Project, Riverside County

Dear Ms. Zepeda-Herman:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information submitted for the above referenced project. The results were positive. Please contact the Pechanga Band of Indians on the attached list for information. Please note that tribes do not always record their sacred sites in the SLF, nor are they required to do so. A SLF search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with a project's geographic area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites, such as the appropriate regional California Historical Research Information System (CHRIS) archaeological Information Center for the presence of recorded archaeological sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. Please contact all of those listed; if they cannot supply information, they may recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green
Cultural Resources Analyst
