PROJECT INFORMATION

Project #: 15118

Name: **MBC Odor Control Facilities-** . A regional biosolids treatment facility consisting of anaerobic digestion, solids thickening and dewatering, and waste energy cogeneration processes. Foul air caused by hydrogen sulfide gas release from the plants process areas is exhausted, collectively ducted, and treated by two Odor Control Systems (OCS). Neither system is able to operate at their designed air flow capacities. This results in inadequate ventilation air changes and prevents the development of negative air pressure in the process units and buildings allowing escape of odorous air within the building atmosphere causing non-conductive working atmosphere for personnel. New electrical and SCADA for a complete operating system.
